Cambridge, Dec. 5. 1857.

My Dear Doctor

Yours of Dec 2d has just come in; and being rather indisposed for study this morning I set down to reply at once.

As to Cuscuta. I have not brought my mind to bear judicially upon the question. But I think that the new discoveries you speak of, rather go to show that the characters employed will not be stable enough, nor marked by habit or geographical distribution to divide Cuscuta. L. into genera. I confess I should rather see them arranged as strong subgenera. But of this you should know best. I admit that analogy with Convolvulus would demand the division, and that the genera formed would be as good as Choisy's. But no good botanist is satisfied with Choisy's proceedings. Read Bentham's Review of that at ~~Geneva~~ volume of De Cand. Prodr. (anonymous) in Hook. London Jour. Botany. and I know from letters that it is thought Choisy has done badly. Of course the 10 genus Convolvulus must be somehow divided. I was going to see what could be done with our species, and how many of his genera could be reduced to subgenera, some.

cm
copyright reserved
MISSOURI BOTANICAL GARDEN

But you can take time to study a finer assemblage of collections than any one has had before in America, — when the collections you speak of come to hand. Let me tell you at length how the Flora is situated.

I have ready for press.

1. Further appx to Compositæ — containing new species Texas, California, Fremont, Bolter — &c — a good many Cruciferæ, all but our principal group of Saxifragæ, which I have got to spend a week over. (You will see in my Cheiris Bor. Amer. Dec. 6 — sent in the parcel made up for you) what I do with Saxifragæ. Torrey says he has the Lobeliaceæ Campanulaceæ ready but has not yet sent me the mss.

Aquifoliaceæ — Ebenaceæ. Styracaceæ — Sapotaceæ — Myrsinaceæ. Primulaceæ. Plantag. Plumbaginaceæ. Lentibulaceæ — I have all ready.

Orobanchaceæ I take up to-day — then Bignoniaceæ. Acanthaceæ. Torrey has mislaid it, and says he has the copy all but ready.

Scrophulariaceæ ready.

Verbenaceæ — Labiatæ. Borragineæ — Hydrophyllaceæ — Polemoniaceæ — Convolvulaceæ — Solanaceæ are yet untouched. — Also Apocyneæ; ~~Loas~~ Oleaceæ — Gentianaceæ, I have ready. Asclepiad. Torrey has worked at — but not systematically, I suppose. —

Now I dont want to begin to print till I have the whole copy ready, or at least each family more or

less elaborated. I go right on now, very steadily, and I think thoroughly. But have to look after Sprague's drawings — must soon write text. — Besides I work evenings upon a sort of Catchem — book Manual of the Botany of the Northern States which I think it be done in perfect by I must have out in the spring for my own classes — who suffer for want of it. — and to prevent a Mr. Wood — who has published a cheap for book, is making a 2d. ed. of it. — from taking position of the ground, from which it would not be easy to drive him subsequently. I shall ask you soon to help me much, as to families beyond what is prepared for the Flora. So I think it likely I shall print both this and Gray's first. and not begin printing Flora until March or April. You need not send copy to Asa until I have fairly begun — for then are extensive families to come before it. I wish I could work fast, and accomplish nine times as much as I do. — About Hook. Cat. Fl. p. 150. b. infra. I will consult the work in Boston this evening, & add to my letter what I can copy. Lowell possesses Graham's herbarium; you know, It must have collected & made specimens of this own garden's plants. The Herb. is not yet put in its cases, but I will soon write it I can get some notes of his specimens, & the loan after which.

The labels of Lindheimer coll. 1845 are as full as 46. — Notes translated from Lindh.

Unfortunately it is too late to change the names of Lindheimer's Agalinis — as I have (too quickly!) printed them in the proceedings of Amer. Acad. & shall send to you to-morrow. — When I drew up the char. of the first I had no idea that the 2d was other than a Gaillardia — I think our Lindheimera is a fine genus — so truly distinct & so prettily allied to Engelmannia & Balduinia — so that there is real propriety in giving it to him.

I am glad to find a collection is on the way from Lindheimer: and greatly approve his going to the Mountains on the Guadalupe. How high are the Mountains? If good real mountains & he can get on to them, & into secluded valleys — he will do great things. As soon as I hear from Lindh. that he has shipped a collection of live plants, I will ask Mr. Lowell for a remittance to him at once.

I shall study the present Lindh. Plants merely as I go on with Flora. — wait for the forthcoming, which does time to study. — and next spring we will make up a great paper of Pl. Lindheimerianæ 1845–46. — & have them in market at once. He will keep ahead of the Bonne people — By the close of next Summer (Deo favente) we may hope to have the Botany of Texas pretty well in our hands.

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

Do you hear from Fendler? Sorber says that regia — the mountain especially — is the best ground to explore in N. America! There is a high mountain right back of Santa Fe. Fendler must ravish it.

Cuscuta monogyna. I have not (nor can College Library) Vahl's Symbolæ. But I think Mr. Lowell has just got it. I will see. — Do not refrain from asking me such questions & to make abstracts from books within my reach. It is my duty & pleasure to do so.

Best in Willd. Spec. Pl. p. 703. I see the habitat. "In Oriente" alone. — And there is appended a description from Vahl. which may decide. You have Willd. I suppose; else I would copy it.

I find that N. O. P. have let the Geog. plants get somewhat a little. — I will forward your note to them. all around.

I owed you —	$ 23.75. —
I have sold a set of Geog. Pl. to Prof. Harvard —	6.00
" I have taken myself a set to send to Ledebour.	6.00
" sent one to Harvey —	6.00
	$ 41.75.

So that I now owe you

I am straitened now & can not send it immediately but will do it ere long. —

What you say about Echinodorus latissima seems well. ~~Kunth~~ " Kunth, enum. 3. p. 157. has a section of Alisma. " Echinodorus Rich. Stam. 12 v. plum. Hort. Trinat."

0 1 2 3 4 5 6 7 8 9 10 cm
copyright reserved
MISSOURI BOTANICAL GARDEN

but he has put in it only typical species.

I send a parcel for you by Express to ~~Bonpland~~ Sullivant for you — containing Pottsteenia tubaeflora & Mimulus Lamarii (sent to Banks.)

returned: — a duplicate of Meisner's Polygoni Pott. etc. — with a copy of my Cuscuta Bot. Ann. Dec. 6. — & Sullivants paper on Musci. —

Sullivant will forward to you. —

Yours ever

Asa Gray.

Hooker enumerates (in Drummond's U.S. Collections) Tecoma stans, from St. Louis. Do. you know it with you?

Cambridge
Aug. 16th 1847

Dear Doctor

My parcel sent to Sullivant & containing one pyxn has been sent back to me the express from ~~Albany~~ to Buffalo to Columbus having been discontinued. How shall I send now.

Yesterday
I received a box of live plants, packed about a year ago. — came to hand. I know not what they were till I opened the boxes. —

Strange to say, — one or two of the Cacti were alive. — but will not survive. I think.

Lind Seemens 2 boxes
charges over $8.00.

Cambridge. April 6. 1847.

My Dear Sir. —

I have neglected you sadly, you will say — having before me yours of Feb. 18. & March 24 (received yesterday) — but the writing & printing of my Manual & my college work have driven me almost to death. — I have no time to eat or sleep — & shall not have till middle of May.

Excuse my hurry — your box came just in time to get the seeds for Hooker off by steamer of the 1st. — Plants in good state.

If I understand you, you want me to run over the plants with your rough determinations — to see whether all stand about right in the Series. — to correct any errors of this sort. — so that you can divide into the sets I have forwarded for distribution. This I will do very soon — The sets can then be distributed & sent on Eastward. — & we will in June say, be printing off the determinations. Enumeration.

— I have taken one of Lindh.'s Specimens to illustrate the genus Veronica in the Genera — Probably "V. umbellata" — a fine species,

I agree with you that the expenses must hereafter be charged to the subscribers on Lindheimers Plants. — War raises the prices of every thing. —

Mr. S. T. Olney, Providence R. Island wishes to subscribe for 1 set (& he thinks also another) of the Lindheimer Plants. — He being a new subscriber, you can add specimens of all those formerly distributed which have been again gathered by L. —

Mr. Lowell & myself will do something for Lindheimer coll. of Texas. — I have been drawing on him much lately for various aid — will presently see what we can do. —

There are many points in your letter for which you will look for a reply. — I will read them over presently. —

Thanks for pointing out the ~~grammatical~~ grammatical slips &c. — in the Tex. Compositae — done in great haste. — The last page was not printed in yet in Acad. Proceedings — have corrected them. — The rest must be corrected with the pen. —

D.

Mr. Carey's former number was 19 ½ —
Mrs. D. T. Carey's still lower. — They want
to be bought up if any vacancies have occurred,
or if there is any other chance to do it. —

Fendler must have some more
money — & if alive, be kept at work the
present season. — The Americans will certainly
put down the insurrection & Fendler must
make large collections & climb mountains —
this summer — Unless you hear bad
news, soon, I think you should send $
at once $100, if you can advance it, I
have asked Gilliman to advance $50 more.
I shall write to-day to Oakes to see
if he will advance the other $50. —

I enclose you the receipt from
Gilliman —

In great haste
Yours ever A. Gray

P. S. I will also apply to Mr.
Greene for Fendler. —

Cambridge. April 28. 1847.

My Dear Doctor

Your epistle of April 3d-17th is before me.—
My hurried reply to yours of Feb & March is probably
by this time received.— I have sent to Lippe
the nos of London Jour. Bot. received from Hooker.—
I have looked over your Sketch of "Continuation
of Catalogue" as you desired. down to no. 5-17.— to see
whether there is any thing out of place. I will look
through the rest. If I can before this goes to you
but I suppose there is little danger of displace-
ment here.— I find that there is a
part of Lin Transactions wanting along in
a nearly consecutive series which I have not.
I will give you a list.— The determina-
tion of genera and species I will take up in due
time after I have your notes and elaboration of what
parts you like to furnish.— and make a job of, and
print right off.— Let me say that I
like your proposal to insert notes making elucida-
tions of particular genera &c as you have given of
Euphorbia sp.— This need not be.— The more there
the better.— To these notes your name is to be
affixed.— If time allows I may also have
short notes of the sort to give.—

322 = Berberis trifoliata. Moricand. Pl. Nov. Amer. t.
340 = Erodium.
363 = Rhus. no doubt. not Sapindaceæ.
375 = a Dalea figured by Moricand from Mexico.—
383 = Schrankia.
397 = Dischanthera. I think.

The Compositæ I have
once reported on.
I have sent the Asclepiad. to
Torrey you will do them quite
as well known.

0 1 2 3 4 5 6 7 8 9 10
cm

MISSOURI BOTANICAL GARDEN

No. 125. Linth. of 1846 (I see it not in your series) is Chaetia sp. —

" 494 (404.121) is a Verbenacea. Best of all the "Santalaceous Plant" (Wm Hagenbach ?)

" 517 (122) = Garrya! — (not G. Fremontii, Hook. but probably one of Benth. pl. Hartw. — it would properly stand in your series after no. 537.

The small box from St. Louis to Cambridge cost $5.50 — Very likely you are right about the restitution of Swallenia.

I like the shape in which you put Alysseae

Again has been sick — is now recovering, but feeble. — He says, secure for him all the fish, but only a few of each when high priced ($1. or $1.50) but many of the cheaper ones. —

You will now have your sets, made up, and sent on. — Perhaps it will be best not to ask Mr. Lowell for cash for seeds till the parcel ~~Cancel~~ of sets comes — when we will give him a statement of account, and make him pay for all together. I will at the same time get something from the Garden paid for him. — I will ask Mr. Lowell the name and address of his agent (he must have one) in New Orleans, for to him you might best consign boxes coming via. N. Orleans to Boston. For Fendler. Parker says he will advance $20. (but has not sent it to me) I have not seen Gruen to ask him: but hope for an advance then.

MISSOURI BOTANICAL GARDEN

Lowell wants a set of the woods.—

Fendler must be kept in the field, and make a large collection this season— in mountains, if possible— Let us once have the collection, and we can turn them to account at once.——

In haste. Yours ever

A Gray

Cambridge June 1st 1847.

My Dear Doctor

Your favor of April 15th to May 11th reached me about 5 days ago. — the vessel from New Orleans with Lindheimer's boxes of live plants arriving just at that time. I have waited till I could get rid of them to ascertain their state. — which I have now done. They reached me with freight and charges amounting to $15. — But every thing except the Yucca and Yucca-like Dracaena plant (Palm-like, with prickly leaves) & the other with narrow leaves, were dead & rotten & worm-eaten. — Dry as dust — the boxes being bored full of holes, — through which also the mice got access & eat. A bad business, the nine so as it so discourages me from applying to Mr. Lowell, since there is almost nothing for him. — There must be no more attempts to send us live plants from Texas at present. Mr. Lowell and myself will make up a sum, however, say $75. which I will send you next week, at the same time arranging my own account. —

0 1 2 3 4 5 6 7 8 9 10
cm

MISSOURI BOTANICAL GARDEN

I have been awfully pressed and troubled in every way, all this spring.

Short wrote me that he had sent the Greggia collection. — not come yet. — He will put them in notes or Supplement to Lindheimer's Enumeration. — When they come I will look at the Greggia &c. — (I have the promise from Harvey of a set of the duplicates of the Coulter & Mexican collection.) I am very anxious to see the Composita especially the Linnæan & Jussieu ones — . When the packages arrive I will collate by your notes. —

Oakes has promised $20 for Fendler, but has not sent it. I have now written to Mr. Greene — hope for $30 from him — must look up $50 more somewhere. — Has Sullivant sent you no more?

As soon as the Lindheimer sets arrive, I will collect from all the subscribers here, — which will be something to remit you. (Will not Short do something for Fendler if you write him. I suppose he is able.)

As to the sets of Pl. Lindheimerianæ &c Asper. do not send abroad for those you speak of.

but let him begin with the present distribution, and fill up with specimens of those already distributed when they occur. This was what he expected and wished.

As to the wanting numbers of Lindheimer's plants, it is quite certain that I have not the specimens. — They could nowhere be mislaid. I am therefore confident that they have not been sent.

In writing what I am to print from you about Lindheimer's collection — to be careful to write only on one side of the paper. — and pretty open.

Some ones may be described in notes, even when there are only 2 specimens, as you propose.

The wood you send (14 specimens) is quite right, only they should all, if possible be transverse quite across the stem. —

I thought I had noticed all the queries in your former letters. — I will be more particular hereafter. — Of course I wish you to translate & print Kunze's remarks on Ferns — whenever you find leisure. — But the things we both have to do require much time, — and I cannot work fast.

GEORGE ENGELMANN HERBARIUM

Rec'd Dec 17
Ans Febr 15

Cambridge. Decr. 3d. 1847.

My Dear Doctor.

Within a few days I have had your two letters. of the 15th & the 20th November. — Let me glance at the last first.

Fortunately I can tell you what the plant is concerning which you write, and of which some flowers are sent. I do not wonder you were puzzled with it, for it is quite anomalous. It is Fouquiera formosa. Lieut Emory also got it. Have you any queer Compositae. In Emory's coll. left with me to study — (which of course I have not done) is a 2d species of my Mss genus Stylomecistrobus — I think from the Gila — a Hauthioid genus, but with decurious scales in place of spines or prickles, and linear-leaves — looks like Salsola or some Chenopodiacea.

Mexicands Pl. Rar. Lecon — are chiefly from Brazil, some from Mexico, chiefly of Berlandier's coll. — 4to. Separate work. — Have lately published.

Save specimens for me of Wislizenus' plants when you can.

Former letter.

Your Wislizenia Cleomoides is quite new to me. & curious. Stanleyamia fumariaefolia. Sweet. Larrea. Torrey has from Emory. I know not whether he has named it.

0 1 2 3 4 5 6 7 8 9 10
cm
copyright reserved
MISSOURI BOTANICAL GARDEN

Well, so Hendler has got back. Poor fellow. — With a pretty good collection. I showed Munk. I suppose you will readily get back the money you forwarded to him at St. Fe. — No difficulty in casting the plants if he has made good specimens. — what a pity he had not made full sets of the whole 1000 species. — The notice has gone out to Hooker for publication by the Steamer of day before yesterday. I long to get hold of a set. — will study & print them right away!

I have not yet seen Lowell to tell him. but he should have one of the fullest sets and then he will take the rest of his advance in ~~the~~ one or the shorter sets — and in live Cacti shells. if you have them. (Pity Hendler could not be out there now. for next spring, under the Officers who are putting things in respectable order there, and who might enable him to get into the Mountains. — I will have an advertisement in Silliman. Land? no. — You write a line to Durand at Philada — he will want a set. — I have written to Carey. — Besides Lowell, Gray, Sullivant, there is Hooker must have an early set. — and Nebb, Hilding. — Brit. Museum. — Harvey, Bentham. &— will immediately take three sets from Hooker. Cleveland I suppose, & a few others here. — probably Tuckerman, They will go right off.

I long to study them.

It seems as if I never should get my confounded Manual through the press. — It runs to 650 pages up to

Mosses — that family now printing is pretty voluminous — & then the Lichens — pour Tuckerman's mss. —

I have a new part of Martius & Endlicher's Flora of Brasil: — chiefly small Endogenous families. — —

done only 50. 50.

In haste Yours ever

A. Gray

P. S. Some time ago I got the small parcel containing missing plants of Lindheimer — and a set of labels. —

The Lindheimer sets should be distributed immediately, and part W to subscribers. — As soon as any of the sets pass through my hands I will go to work at the Enumeration. —

Dear Doctor

By yours of the 25th ult. just received.
I see you have found out the
Tonquinia, about which I wrote a few days
ago. Your drawing it identical with Bonnia
does not surprize me, and will make an in-
teresting note in your account. But do not
be too sure that your species is distinct from F.
formosa — though I know nothing to the contrary —
and perhaps the difference in the no. of stamens
ought to suffice.

I write this time at once, thinking you may
like to know at once about the Taurinus-like
plant, which is Anemopsis Californica, Nutt. in
Ann. Nat. Hist. 1. p. 136; Hook. & Arn. in Bot. Beechey, p. 390,
t. 92. Hartweg got it also in Mexico (Zacatecas) & it
is closely allied to Houttuynia.

I shall have something to send you, through Lichtenst
as you direct. I long to get Sanders's Plants, —

Yours, truly
A. Gray

Cambridge, Monday

Morning

Dec 20

1847

Dear Doctor

I got a parcel from

N. Y. on Saturday Evening, con-

taining a few welcome plants of

Nuttall's Coll. and a set of

Fendler's from Santa Fe - up to

Rosaceæ. The specimens are

perfectly charming! so well-made,

so full & perfect. Better never

were made. In a week I shall

take them right up to Study. - and

they are Rocky Mt. forms of vegetation

entirely, so I can do it with ease

and comfort. It is a cool region

that, and dry. If there come

from the Plains, what will the

Mountain yield. I must go back, or a new Collector, now that order is restored there.

All Fendler's collection will sell at once. — no fear. such fine specimens & so many good plants. — Pity that F. did not know enough to leave out some of the common plants. — except 2 or 3 spec. for us. — and letter the same label on the new plants around them.

Send on the rest soon —

Yours cordially

A Gray.

The letter of Englemann is quite satisfactory. I should be glad to see his Mss objected. It is clearly a species of my Oxystylis (Rem's 2nd Report) - which you kindly sent described from miserable rotten specimens. I think, however, it must be a second species - for he describes it as much branched: (ours is simple or nearly so) - & the racemes elongated (in ours short & axillary).

~~Dodgeia~~ The specific name of his new Dodgeia seems is hardly proper - seeing so many others of the genus have pedicelled leaves.

It was his Geranium Concanthum - my G. Fremontii?

Larrea glutinosa must be Moricand's plant.

The "Creosote" of Lt. Abert.

How I regret not being able to purchase sets of Fendler's & Wislizenus' plants. I can, however, see them in your herbarium

Englemann will not have time to give even a hurried examination of them ~~checking~~ before they are distributed

New York, Dec.r 1847.

Dear Doctor —

Yours of the 4th inst. has been on my Table for some days - & it is time that I answered it, though news is scarce. The B.st Illustrations I should be glad to have after New Years - for I shall not need them till the holidays are over -

—

We have not received Harry Cates from Gal.y since he left for Charleston - but the news-papers say he is doing well there.

So you will finish the Manual at about the time to which I limited you! - I said it could not be got ready before the early part of 1848. It will have to be sold for $2 - & will go well at that price.

The Flora Brasil. has not reached me yet - but Hastings says I shall have it in a day or two.

(at Cambridge)

Mr. Zuckerman will take
one set of Fendler's plants -
as early as you please to put
them in the list -
